

## CUI Issues

“Missing menu”, “Command not working”, etc.

Occurs on specific user account only

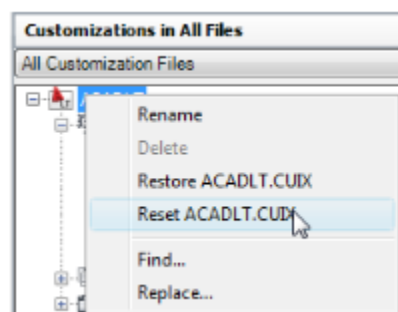

### Possible Cause:

Corrupted CUI Files

### Suggestions:

**Restore CUI file.**

- Type CUI at command line. Right-click on the main cuix file

- **Restore** - Set back to the last iteration prior to the changes
- **Reset** - Perform a reset from the UserDataCache folder, results in an 'out-of-the-box-version'

**Remove** - C:\Documents and Settings\

- Re-start product, allow file to re-generate

**Copy CUI file from folder** - C:\Program Files\
